SUMMARY

My main academic interest is search for possibilities how to connect economics which usually deals with a very abstract formalized concept of an economic agent with phenomenologically traceable foundations of everyday reality of action. I deal with topics of interpretation and rationality as they are applied in economic models or used for their construction. My main areas of interest are the philosophy and methodology of economics and the social scientific theory of the Austrian school (L. Mises, F. A. Hayek).

WORK EXPERIENCE

- Since 2012 Faculty, *Charles University in Prague, Faculty of Humanities*
